VisA held-out test | single-seed post-hoc examples
Paired evaluation n = 120; deterministic diagnostic selection

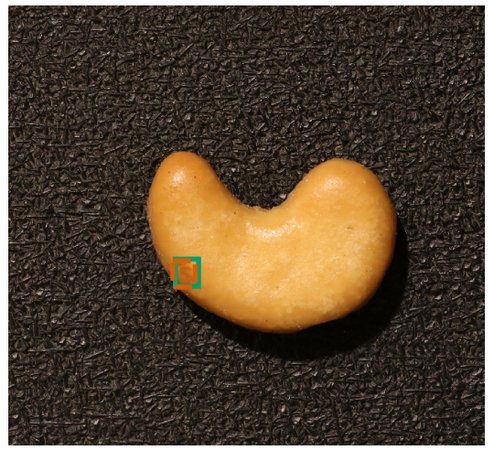

Ground-truth union box Predicted union box

Base | Label: anomalous | Pred: normal
Class: wrong | Union-box IoU: 0.000

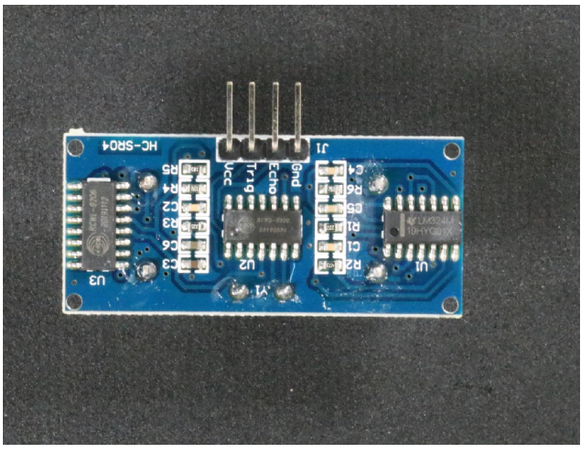

Base wrong / SFT correct | cashew

Coverage SFT | Label: anomalous | Pred: anomalous
Class: correct | Union-box IoU: 0.712

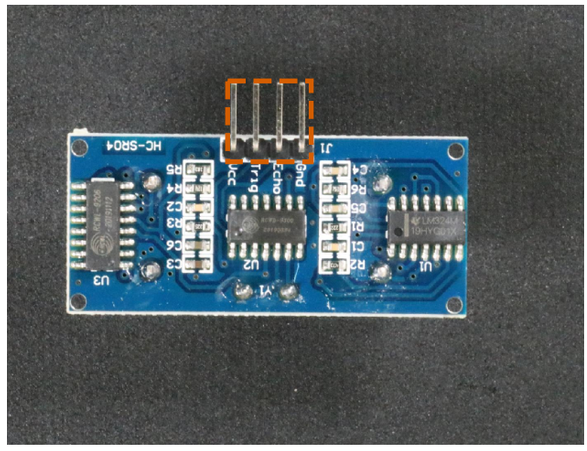

Base wrong / SFT correct | cashew

Base | Label: normal | Pred: normal
Class: correct | Union-box IoU: N/A

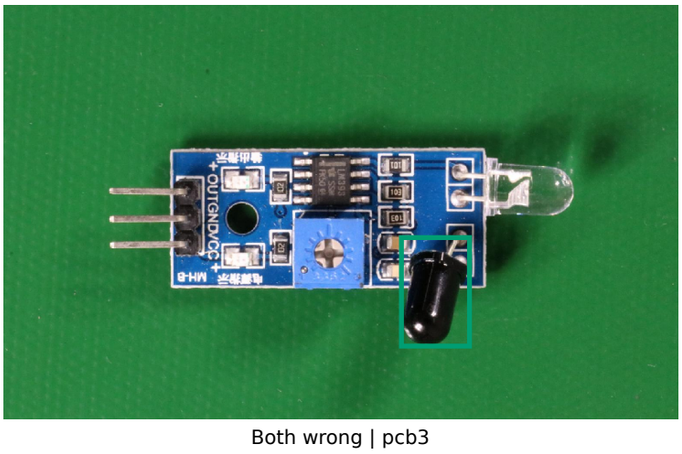

Base correct / SFT wrong | pcb2

Coverage SFT | Label: normal | Pred: anomalous
Class: wrong | Union-box IoU: N/A

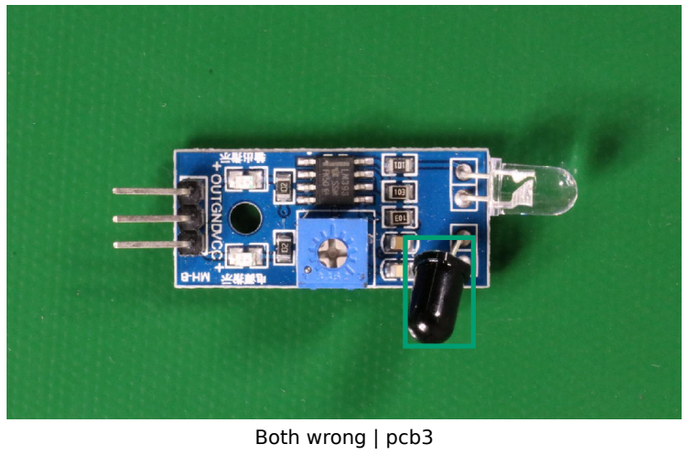

Base correct / SFT wrong | pcb2

Base | Label: anomalous | Pred: normal
Class: wrong | Union-box IoU: 0.000

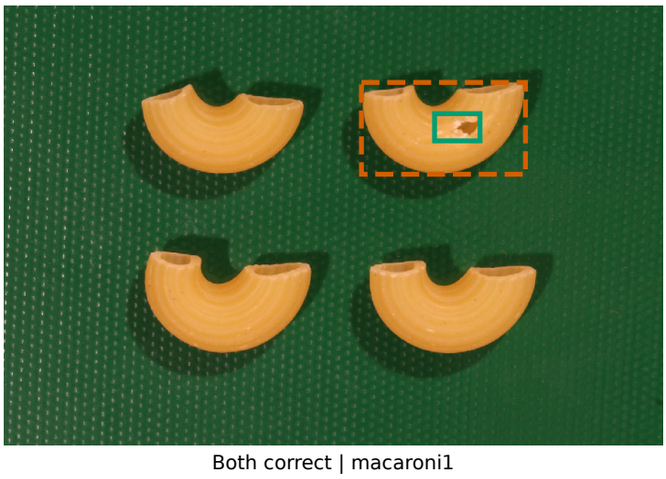

Both wrong | pcb3

Coverage SFT | Label: anomalous | Pred: normal
Class: wrong | Union-box IoU: 0.000

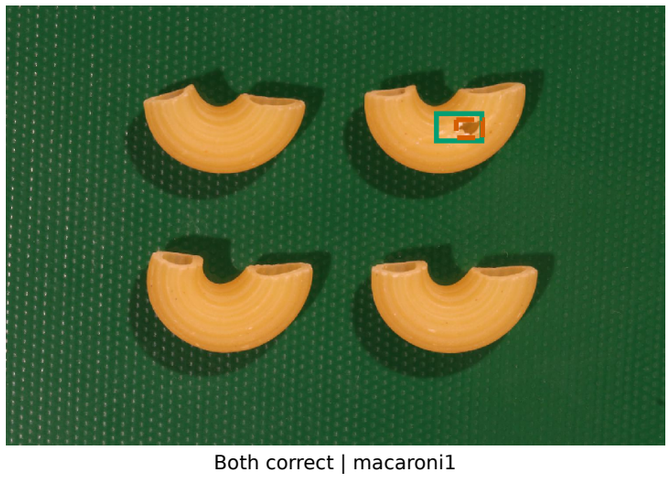

Both wrong | pcb3

Base | Label: anomalous | Pred: anomalous
Class: correct | Union-box IoU: 0.082

Both correct | macaroni1

Coverage SFT | Label: anomalous | Pred: anomalous
Class: correct | Union-box IoU: 0.370

Both correct | macaroni1

Examples do not estimate aggregate performance. Identical full images in both columns.
Ground truth is overlaid after inference; no inference-time crop or label input.
